HotShop 101

How many times have you walked aimlessly through a grocery store trying to remember what was on your shopping list, only to buy several things you didn't need? This all-in-one app simplifies the process of keeping track of your groceries at home and splits expenses in a fair and efficient way. HotShop is an easy shopping app that can be used by the whole household to ensure that you never forget your groceries again.

Who?

- Anyone who eats 😊
- Families
- Roommates

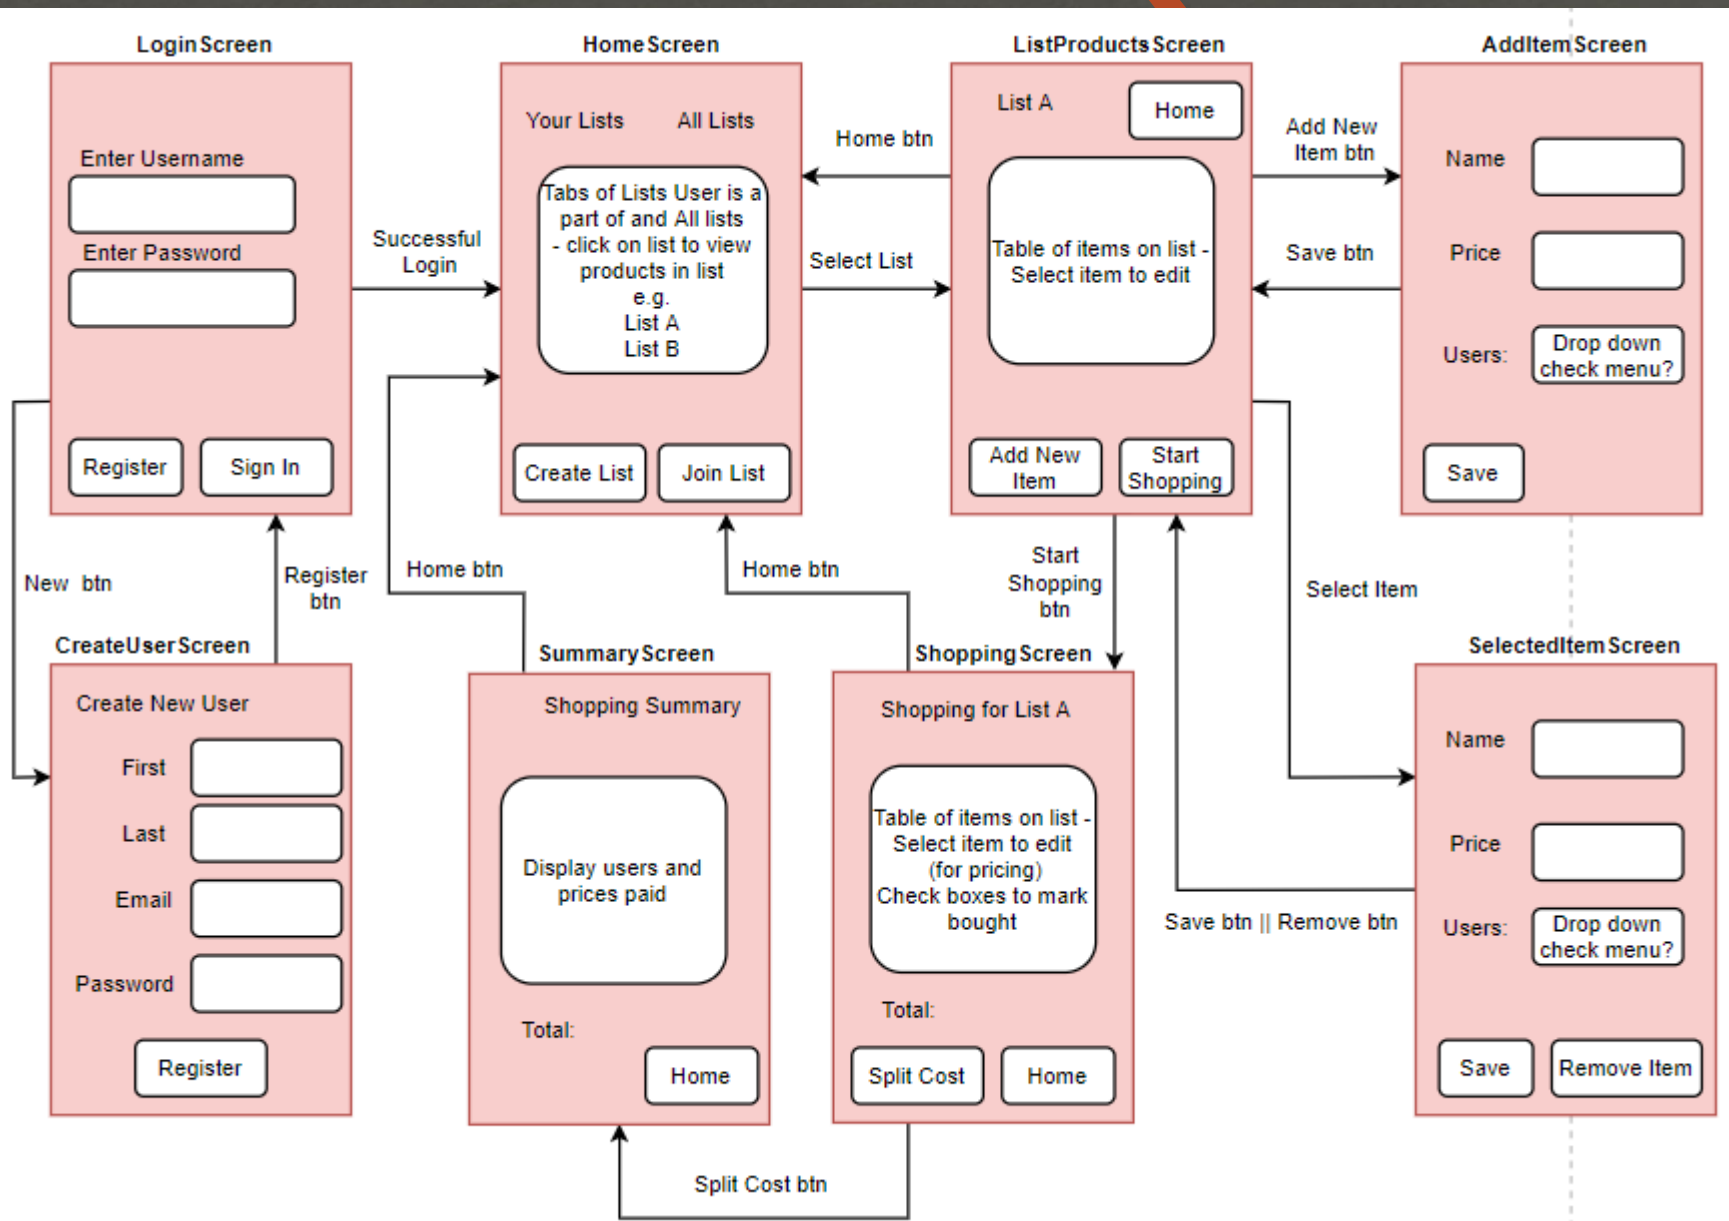

What?

- **Create separate shopping lists**
- **Mark the consumers of the items**
- **Split the shopping list cost by what each person uses**

Why?

- Save time
- Save money
- Save relationships

Shopping Trip Use-Case Diagram

Use Case:

- ◆ Split pricing

Actors:

- ◆ Authenticated user, database, product consumers

Description:

- ◆ When the user completes shopping, he/she can choose to split pricing of the products based on the consumers of the product. This will update and store the new list data to the database and summarize price owed by each consumer.

Requirements:

- ◆ R3.1: The application shall calculate the split cost of the completed shopping based on the items bought, price of the products input by the user, as well as the specified consumers receiving the product.

Use Cases:

- ◆ User must already be logged in and authenticated. The user must have₆ already added items to a list, priced them, and marked the product consumers.
